🎬 #1  HEADING - SAMPLE SCRIPT- BRIEF STORY OF XSTUDIO
    《9》 Elements
==================================================
```

HISTORY : STUDIODB

History of StudioDB - the original history of XStudioScripts scenes that were included in that App will be included in this Apps history.

Note - XStudioScripts was only available for iPad.

If you were one of the few people that bought XStudio Scripts between 2012 to ~2015 while it was in App Store - the next 15 Scenes were part of a sample Script- if you had taken a look at the sample Script- the below Scenes would have been included.

Note - XStudioScripts (2012-2016) StudioPro(2015 - present-> not in App Store) StudioDB (coming soon)

~2015 a new app was created StudioPro which was both for iPhone and iPad and included the option for writing Series - and additional features. As a sole developer- there was still work left (user guide, web updates, free vs bought version). At the time - I decided I built what I wanted for me - and it was enough. At the time - the few apps I had in App Store were not selling. Removed them- removed website

So for ~7+ years - I maintained my app developer account with Apple so I could continue to use the StudioPro

In 2022 - I took over my nephew's Neel Mac Book - when he upgraded his Mac book - at which point I retired my 2009 Mac to build this first of many apps to follow.

Note - next 15 scenes are exactly the same as they appeared in XStudioScripts from 12-2012 to ~2015

===

YEAR: 2009

2009 - Driving home from a birthday party - with Mr H

MR H
So what are you doing this days?

Ray thinks for a second - before saying

RAY
(driving)
I'm writing stories - screen plays

As they are driving - the conversation continues -
they are in New Jersey heading to get some food

MR H
How long has it been - since you
worked?

RAY
(little smile)
For some one else - Couple years -
I am focused on writing right now
- may be my best work so far

Mr H is thinking back - and then says

MR H
They called you MJ in Buffalo

RAY
(big smile)
I was the best - had to create an
ego to make sure work got done -
MJ came in handy

As they drive - chat about old days - go eat at a
famous sub shop

As they are driving back to the house

MR H
You should build Apps - say you
can do anything - build apps

RAY
(thinking)
I will look into it - but I love
writing

Ray will be thinking - maybe he needs an additional hobby to keep his mind occupied

CLOSE-UP SHOT

```
========================================================
🎬 #3   INT.HOUSE.NIGHT
   《24》 Elements
========================================================
```

For next few days - Ray will be researching on the Web
on building Apps

Ray's history in writing screen plays

Note - Ray's been Consulting as ETL/Datawarehouse -
Programmer Analyst since 1996. Holds various
certifications in IT arena.

Note - While Traveling and Consulting - on the side
has been writing his Scripts - casting his Scripts -
according to him when they are made into movies -
will be instant classics

Back to the Story

CUT TO: MALL

After researching for about a week - Ray, Raj and Neel
go to the Mall - Apple Store

Raj is 13 and Neel is 11 at the moment

                    RAJ
            You really buying a Mac?

                    RAY
        I have too - I want to build Apps

                    NEEL
              You know how?

                    RAY
                (little smile)
          You know what I was known as in
                    Buffalo

Neel got a smile on his face

                    NEEL
                Michel Jordan

                    RAY
        I was the best - I am the best - I
            can do anything I want

Raj is thinking as he says

                           RAJ
                 Do you even know how?

                           RAY
              You know all the professional
             Certifications I have - I taught
             my self - you can learn anything
             you want - I will master this too

Neel with a little smile on his face

                          NEEL
                    Just like that

                           RAY
               I am already JAVA certified
             professional - just need to learn
                 the rules on building apps

Ray buys a $1200 Mac - and latest iPod version at this
time

Back in New Jersey - before driving to Chicago

RAJ
Master building Apps yet - made
any?

RAY
Working on one - screen writing App

Raj is thinking - as he says

RAJ
I told you about Celtx

Ray with little smile - looks at Raj and says

RAY
I already converted all my scripts
to Celtx - I build a process that
let me do that - now I want it in
my hands and make it have what I
want in writing screen plays

Neel looks at Ray - and asks

NEEL
You really moving to Chicago?

RAY
For now - The job is similar to
what I was doing in Buffalo - and
you remember what I was known as

NEEL
(little smile)
I remember

Ray will take a contract for 6 months - which will
turn into 8 months before returning back to NJ

```
===================================================
🎬 #8  INT/EXT.RETURN FROM CHICAGO.NIGHT
  《24》 Elements
===================================================
```

JANUARY: 2012

It's been a year since Ray has been really focused on
building apps. While working in Chicago - on off
time had been mostly focused on updating his scripts

Now back in Jersey - got a good version of XScript

After adding more features

                    NEEL
                 Is it done?

Ray thinks for a second - then says

                    RAY
          I build something that I wanted -
             the way I write the script

                    NEEL
                 So is it done?

                    RAY
          Yes and No - the writing still
          need little work - it can write -
             but it needs to be better

                    RAJ
              What do you mean?

                    RAY
          I need to think about it - Also
            need to build Import Export

After looking at it for a while - will notice too many
colors - not happy with the initial version on
writing

Raj shows him another app

                    RAJ
             See how this App looks

Ray is thinking - realizes the actual writing need
some changes

                    RAY
           I know - just had to build the
          heart first - the dress up - will
                   come later

Raj looks little confused - Ray realizes that

RAY

Had to make sure it does what I
wanted first - the database - the
flow - and I really want to redo
- redesign the database - make it
more efficient

Raj did not expect that

RAJ

Restart - how long will that take?

RAY
(little smile)

Want to add more - had time to
think - I can see it in my head -
Don't need time for a learning
curve now - Also I need more room
to write

Raj seems to know what Ray is suggesting - and says

RAJ

iPad?

RAY
(little smile)

I will redo the database for iPad
version - I already know what I
want - just got to make it happen

```
==================================================
```
🎬 **#9 INT/EXT.RAY, RAJ AND NEEL**
《61》 *Elements*
```
==================================================
```

Will see Ray, Raj and Neel interact for next 9 months

RAY
What do you think?

RAJ
Too many colors - writing still
need works

RAY
(thinking)
Writing I need to fine tune it -
colors stay

Another point in time

NEEL
Got too many typos

RAY
(little smile)
Good - that's why I got you for

NEEL
Rotation is not working right?

RAJ
Get the Import working?

As this continues for months

RAJ
Text is too small

NEEL
Rotation is still off in certain
cases

After picking them up from school - driving back home

RAJ
Need to fill up the screen - too
many Tabs

NEEL
Got Import working?

Weekends after playing basketball

RAJ

What about rotation in certain
cases?

RAY
I looked into it - you are right -
because I am using tabs

NEEL
How you going to fix it?

RAY
In this version - you will not be
able to rotate - Portrait is how
this app should be used anyway

NEEL
Really

RAY
When you are writing - Portrait is
the best orientation

At another point in time

NEEL
It crashed

RAY
(little smile)
I know - still adding features and
testing

RAJ
What version?

RAY
At the end - Version 1.0 - but I
have already went through at
least 2 major version

NEEL
(thinking)
Get to a point where it's good
enough - then see what kind of
feedbacks you get

Ray will seem to agree with Neel - as he says

RAY
I know - want to add few more
functionality - but I know I got
to freeze making changes at some
point

Weeks later

NEEL
                Found couple more typos

                           RAJ
               What about user guide?

                           RAY
               I am working on it

As Raj and Neel come down from their room to go to
school - they see Ray on the Mac with the iPad
connected to the Mac

                           NEEL
                 Up all night?

                           RAY
               Best time to work

                           RAJ
            That's everyday this week

                           RAY
                     (little smile)
            Sleep while you in school

SEPTEMBER: 2012

After Ray got Import Export working and user interface
to the Documents folder

                           RAY
                      (big smile)
               I am almost there

                           NEEL
             Import Export working?

                           RAY
                      (big smile)
                         Yes

                           NEEL
                    How long?

                           RAY
             Actual import time seconds - I
             imported 10 of my scripts from
             Celtx to XStudio in few minutes

                           NEEL
                   Few minutes

Neel don't seem satisfied

                           RAY

I have to move the Celtx file to
the App through ITunes - then
import it into the script

Neel will seem ok with it - and ask

                    RAJ
          What about testing?

                    RAY
    I have been testing - its there -
    I am changing my scripts on iPad
    now - started a new Script on
                    iPad

Future point in time - Ray is reading his Scripts on
iPad - as Neel approaches him

                    NEEL
          What's next?

                    RAY
        Maybe be a sample script

Ray is thinking - then says

                    RAY
    User guide inside a Project as
                Scripts

                    RAJ
          What do you mean?

                    RAY
    When you install the App - it
    comes with a Project that contain
    Scripts that explains the App

                    RAJ
                (thinking)
      Sample Project and Script?

                    RAY
    Yes - a sample Project every time
    there is an update - explaining
          what has changed

===
🎬 **#10 INT.VERSION 1 - ENDING.AFTERNOON**
《14》 *Elements*
===

After creating the initial version of sample Project and Scripts containing 'User Guide' and 'How to Guide - Q&A'

ZOOM IN: RAY

Ray is thinking - maybe give a sample script

                    RAY
                (thinking)
        Why not - a brief story about the
            building stages of this App

After quickly writing the first two scenes - Ray walks toward Raj and Neel and says

                    RAY
        Got a perfect idea on what the
        sample Script in a Project should
                    be about

Raj just looks at Ray to see where he's going

                    RAY
                (big smile)
        Brief outline story about me
            building this app

Raj got a smile - as Ray shows him the first two scenes - as Raj notices his name in it

                    RAJ
            Don't use my name

                    RAY
        I am Ray - what name you want me
                    to use?

Raj smiles - starts to think

ZOOM OUT:

FADE IN TO: DARKNESS

===
🎬 #11 INT.VERSION 2.AFTERNOON
  《18》 Elements
===

6: MONTHS LATER

After 6 Months - Ray realizes that the User Interface
needs a change

                        RAJ
              What you doing now?

                        RAY
            Building a new App - XPoker

                        RAJ
                    XPoker?

                        RAY
            That's what I am calling it for
            the moment - it will let a user
              have the power of the Casino
            Tournament hosting - in the palms
              of their hand - and lot more

Ray is thinking - then says

                        RAY
            XStudio Scripts need a new User
                    Interface

                        RAJ
              What do you mean?

                        RAY
            The Sub Tab Menu for Project and
            Script need to go - too many Tabs

Raj got a smile on his face

                        RAJ
              I told you that last year

                        RAY
            Took me a while to realize that -
            plus that would had been too much
              change at that time - but I am
                    ready for it now

Few months later

XStudio Scripts Ver 2.0 ready

Modify - User Guide - Script XStudio History

Modify Website

THE END: FOR NOW

🎬 **#12   HEADING - IOS 7**

0 *Elements*

==

Just as Version 2.0 is released - here comes IOS 7

After reading about IOS 7

> **RAY**
> *(little smile)*
> Are you kidding me?

Raj comes over and asks

> **RAJ**
> What is it?

> **RAY**
> I got to redo all my views and
> change some of the code?

> **RAJ**
> You just released 2.0

> **RAY**
> I will have to retouch every thing
> - and use Auto layout

> **RAJ**
> After upgrading the mac memory to
> 8 - is it still slow?

> **RAY**
> *(little smile)*
> Little better then before

After thinking for a while

> **RAY**
> I will build 'XPoker Room' first -
> using IOS7 - then create version
> 2.1

```
==================================================
🎬 #14   INT.VERSION 2.1.NIGHT
   《23》 Elements
==================================================
```

Few Months later

Build 2 new apps for IOS 7 - 'XPoker Room' and 'Gamber Stats'

RAJ
Is it done?

RAY
Almost - got to create Icons and
back ground images - but as far
as the coding - I believe I am
done

RAJ
What do you think of IOS 7 now?

After thinking for few seconds - with a smile on his face

RAY
I like it - Auto layout and
Collection view

RAJ
What about XStudio Scripts?

RAY
Time for 2.1 - going to make few
changes

RAJ
What do you mean?

RAY
Not in database - just the views -
going to replace many Table Views
with Collection View

After thinking for a while

RAY
And have a new interface in
editing and controlling
Characters, Locations, Scripts
and Scenes

RAJ
What you going to change?

RAY
                Remove the pop ups in editing
                         those objects

                              RAJ
                Need to focus on one of them?

                              RAY
           No - going to do all 3 at the same
            time - and release it around the
                         same time?

Raj with little Smile

                              RAJ
                          (little smile)
             Still writing Stories - Scripts?

                              RAY
                      That never stops

Couple months later

All 3 Apps ready

THE END: FOR NOW

As Version iOS 8 is available - noticed the keyboard
change- that requires to modify the writing process

Resulting in creating version 2.2

At the same time modified views in adding and editing
objects due to iOS 8.1 and XCODE 6.1.1 chances

THE END: FOR NOW

===
🎬 **#17 HEADING - BACK TO PRESENT**
  《4》 *Elements*
===

That ends the original sample script - now from point of view of 2023

Note - Looking back - building apps now has become so much easier- is really underselling it - also part of it was that I needed a Mac with more memory

As I mentioned before ~7 years of using StudioPro and now building the StudioDB - I have the tools to make the version of the app that I had imagined over 10 years ago.

Note - Writing part is close to where I want - and it will just get better

  In April 2022 - I started looking into what has
evolved in App development

Swift will be new - as I look into it - I will start
building a new app. And as I look into SwiftUI - I
start thinking- it's time to retire StudioPro (I was
the Only one that was using it) - and build StudioDB.

I will star to build a BasketballLeagueDB App

Neel will be part of a league - and it would be
something useful- as he will tell me about his league
and team setups

Note - Neel will tell me about the team setups - all
the possibilities - leader board - drafts for league
players - playoffs

I will build the initial version of it

After learning about the new iOS 16 - Split View (the
SplitView I wished was available in 2012) I will
create the initial skeleton of the StudioDB

FAMILY: GATHERING

Raj, Neel, Natalie, Lucas and others will have gathered in Florida.

We all will be playing a game that they will call Seattle. Multi Player Game - a family game

At this point I will be working on BasketballLeagueDB and would had asked Raj and Neel on additional ideas for an App

One of them will say - build this Seattle app - the game that we were playing - and other member of the family will also say - Build this game we are playing

After that day - I will think about building the Seattle game

So for a time period I will be focused on Building multi player games - and I will build there Seattle - and I will go on and build Initial versions of Daytona, Orlando, Miami, Boston and Atlanta.

Note - just mentioned some possible future apps in App Store. I have a version that works - but it requires some steps the user have to take - it just needs a better flow - and a server backend

At this point the StudioDB is in its initial stage with lot of work left

And I am still using StudioPro - and the writing process is still from what was possible from 2015 - and I know in 2023 - with SwiftUI and the latest enhancement- it could be much better

And I will focus on finishing the StudioDB

Note - with In App Purchases option - it will be free for any writer to try out StudioDB

Note - I know everyone has their own method of writing- I am just throwing this option out there
